

Classroom Design

Start small by envisioning a single task or activity and designing the students and space around that.

Activity	
Goal	

Ideal Teaching Method

What are you trying to teach? How could you best facilitate this learning?

Physical Space Arrangement

*How would you arrange your class to best suit your goals?
A drawing or sketch could be a great place to start, why not incorporate student input.*

Student Roles

This is in whatever capacity you are teaching, in small groups they might have specific roles (like supply manager) but if its independent work then their roles is "productive worker"

Anticipate Needs

*What needs or problem might your students have?
What are the expectations and consequences? - Discuss & have physically posted if possible.*

Ideal Classroom

Activity	
-----------------	--

If you have your own classroom, how would you ideally design it to suit a particular task. Don't think about it as general use, specifically for this one activity – how would it look?

Consider labeling not only locations and supplies, but also draw anticipated student traffic flow.
